
Index

A

Acute lymphoblastic leukemia	78
Affinity cytochemistry	14
Alkali-labile	40
Alkaline denaturations.....	20
Alkaline phosphatase	10, 22, 94, 100
AMCA.....	21
Amount	
– of labeled RNA transcript	49
– of nonradioactively labeled RNA probe.....	14
Amplified chromosome sequences	83
Antibody conjugates	12
Anti-digoxigenin (anti-DIG).....	10
Antifading agent.....	21
Antisense RNA probe.....	140, 146, 154
APAAP	148
APase.....	99
Aqueous mounting	100, 136
ATPase	80
Avidin	11

B

Background	20
Background fluorescence.....	84
Bacterial cells.....	119
Base mismatch.....	30
BCIG.....	108
BCIP.....	22, 100, 108
Beta-Gal.....	111
Biotin	
– -ddUTP	53
– -dUTP	56
– -High Prime	36
– -labeled probe	72
– labeling.....	11
– RNA Labeling Mix.....	49
Bladder tumor	102
Blocking reagent.....	20
Blue fluorescence.....	21
Bouin's fixative	18
BrdU labeling	108
Brightfield microscopy.....	23, 113

C

Cacodylate	53
Calculate formamide concentration	138
CCD.....	24, 80
Cell	
– fixation	119
– preparation	109
– smears.....	119
Central nervous system.....	144
<i>Chironomus</i>	90
Chromosomal	
– <i>in situ</i> hybridization	69
– <i>in situ</i> suppression	79
– spreads.....	18
Chromosome.....	18
Chronic myeloid leukemia	79
Circular DNA	36
CISS	79
Collagenase.....	19
Colloidal gold.....	10
Colorimetric detection methods	22
Colors of fluorophores.....	21
Colors of immunocytochemical precipitates	150
Combinatorial labeling.....	21
Combined DNA <i>in situ</i> hybridization and immunocytochemistry	148
Competition <i>in situ</i> hybridization	31
Competitive hybridization	71
Competitor DNA	20, 31
Complexity of probe.....	31
Condylomatous lesion	123
Confocal fluorescence microscopy.....	203
Confocal laser scanning microscopy.....	24
Controls, ISH.....	139
Conventional fluorescence microscopy	203
Cosmid probes	71
COT Human DNA.....	71, 81
Coumarin	21
Counterstain.....	21, 136
Coverslip, cell preparations on	94
cRNA probes	140
Crosslinking of proteins	18
Cryostat sections	18
Cultured cells.....	94, 116, 173
CY3	21
Cycles, PCR.....	13

D

DAB.....	22
DAPI	21
Darkfield microscopy.....	23
ddH ₂ O.....	131
Deionized formamide.....	83
Denaturation of polytene chromosomes.....	90
Denaturation of probe and target.....	20
Denhardt's reagent	32
DEPC	131
Detection of BrdU.....	112
Detection of proteins	148
Detergent	19
Dextran sulfate	30, 32
Diaminobenzidine → <i>see DAB</i>	
Diethylpyrocarbonate → <i>see DEPC</i>	
DIG	
– -ddUTP	53
– detection of.....	10
– -dUTP	56
– -High Prime	36
– -labeled DNA probe	89, 123
– -labeled nucleotides.....	10
– -labeled RNA probes	144, 168
– Oligonucleotide 3'-End Labeling Kit.....	53
– Oligonucleotide Tailing Kit.....	56
– -NHS ester.....	10, 14
– RNA Labeling Mix.....	49
– -UTP/dUTP/ddUTP.....	11
Digesting protein.....	19
Digital imaging.....	24
Digitalis.....	10
Digoxigenin → <i>see DIG</i>	
Direct detection of ISH.....	9
Divalent cations.....	29
DNA-DNA hybrids	19
DNA polymerase.....	10
DNA-RNA hybrids.....	15
DNase I	13
Double color FISH.....	76
Double-stranded probes.....	30
Drosophila.....	90, 186
Duplex	29

E

Effect of template amount.....	36
Electron microscopy	24
Embedding	113
Endogenous enzyme inactivation	19
Endogenous RNA.....	19
Enzymatic labeling.....	11, 13
Enzyme	22
– -based cytochemical detection.....	110
– precipitation reactions	101
Even-skipped transcripts	193
Extraction of proteins	19

F

Fading of hybridization signal.....	83
Fast Red TR	22, 100, 148
FISH.....	21, 197
Fixation.....	18
Flow cytometry	24
Flow diagram for in situ hybridization.....	25
Fluorescein	12
– -dUTP	12
– -High Prime	36
– -labeled nucleotides.....	12
– -labeled probes.....	74
– RNA Labeling Mix.....	49
Fluorescence	21
– <i>in situ</i> hybridization	85
– microscopy.....	106
Fluorescent detection of alkaline phosphatase	22
Fluorescent ICC	108
Fluorochrome-labeled nucleotides	12
Fluorochromes	21
Formaldehyde.....	18
Formalin fixation	18
Formamide	29
Fragment length.....	30
Freeze-dried.....	18
Frozen sections	131, 162

G

GC content	28
GC pairs	28
Gelatin-coated slides	130
Genomic DNA	28
Glutaraldehyde-activated gelatin chrome aluminum slides	18
Glutaraldehyde fixation	151
Glycerol-para-phenylenediamine-mixture	91
Green fluorescence	21
Guidelines for in situ hybridization	18

H

HCl	19
Heat-denatured DNA for random primed labeling	36
Heat denaturation of probe and target	20
Heterogeneous population of probe	13
Highly repetitive DNA	92
High Prime	36
High Pure PCR Product Purification Kit	64
High stringency	30
HNPP	105
HNPP Fluorescent Detection Set	105
Homogeneous labeling methods for DNA	13
Homogeneous labeling methods for RNA	14
Horseshoe peroxidase	108
Human	
– chromosomes in suspension	85
Hybridization	30
– buffer	95
– temperature	28
– variables	30
Hydrating	30

I

ICC	108
Immobilized nucleic acids	28
Immunocytochemical detection schemes	201
Immunocytochemistry	20, 108
<i>in situ</i>	
– hybridization to mRNA	116
– PCR	13
– renaturation of target DNA	14
In vitro transcription	49
Indirect (immunological) detection	9
Infrared dye	21
Interphase nuclei	197
ISH protocol, general outline of	18
ISH to cells, index of articles	67
ISH to tissues, index of articles	67
Isolated metaphase chromosomes	85

K

Ki67 antigen	113
Kinetics	30
Klenow enzyme	13

L

Labeling density	36
Labeling synthetic oligonucleotides enzymatically	14
Large DNA probes	32
Length	
– and composition of the tail	56
– of amplified probe	13
– of labeled fragments	13
Linearize	49
Lipid membrane components	19
Long probes	30
Lower stringency	30
Lung tumor cell line	113
Lymphocytes	85

M

Melting point	28
Melting temperature	28
Metaphase chromosome spreads	18, 76
Milky background fluorescence	84
Modified oligonucleotides	9
Modified nucleotide	36
Monovalent cations	29
mRNA	108
Multicolor FISH	75
Multiple simultaneous hybridizations	12
Multiple target, multicolor detection	94

N

NBT (Nitro-blue tetrazolium)	10, 22, 60, 100, 151
Negative controls	139, 126
Nick translation	13, 47

O

Oligonucleotide	31
– containing functional groups	9
– hybridization	31
– 3'-end labeling	53
– probes	119, 157
– tailing	56

P

PAP.....	148
Paraffin embedded.....	18, 123
Paraformaldehyde.....	18, 108
PCR.....	13
– DIG Labeling Mix.....	38
– DIG Probe Synthesis Kit.....	38
– fluorescein labeling.....	43
– Fluorescein Labeling Mix.....	38
– labeling.....	39
– primers.....	13
Penetration of probes.....	14, 31
Pepsin.....	19
Permeabilization.....	18
Peroxidase.....	22
pH.....	28
Phase contrast.....	23
POD.....	22
Polylinker.....	49
Polylysine.....	18
Polymerase Chain Reaction „ see PCR	
Polytene chromosomes.....	92
Positive controls.....	139
Posthybridization washes.....	20
Prehybridization.....	19
Preparation of metaphase chromosomes.....	69, 85
Pretreatment of sections.....	131
Pretreatment of slides.....	69
Probe	
– concentration.....	30
– length.....	30
– sequences, unique.....	38, 70, 95
Probes containing repetitive elements.....	38, 95
Problems with radioactive probes.....	8
Procedures for ISH.....	68
Propidium iodide.....	21
Protease.....	19
Proteinase K.....	125
Protein embedding layer.....	101
Purification of labeled probe.....	46
Purification of template DNA.....	49
PVA.....	100

R

Random primed labeling.....	13
Rate limiting step in hybridization.....	30
Rate of renaturation.....	30
Ratio-labeling.....	22
rDNA.....	197
Reactive oligonucleotide.....	14
Reanneal.....	31
Red fluorescence.....	21
Reflection-contrast microscopy.....	23
Repeated sequences.....	197
Repetitive DNA.....	31
Repetitive DNA probe.....	85
Rhodamine.....	12
RNA	
– complementary.....	14
– labeling.....	49
– polymerase.....	10, 14, 49
– probes.....	14, 129
– -RNA in situ hybridization.....	151, 160
– transcript.....	49
RNase.....	19, 69, 95
Run-around transcripts.....	40
Run-off transcripts.....	40

S

Salt concentration	14, 29
Seminal vesicle secretion protein II.....	140
Sense RNA probe	146, 154
Sensitivity	8, 56
Short probes	30
Signal amplification	13
Silane-coated slides	130
Silver	
– grains under darkfield microscopy.....	23
Simultaneous probe and target denaturation.....	96
Single	
– color fluorescent detection.....	72
– -stranded probes.....	31
Size of probe.....	14
Slide preparation.....	18
Small size	31
SP6	10
SSC.....	32
Stability	
– influence of the hybridization conditions on.....	14
– of ICC precipitate.....	108
– of labeled probes.....	57
– of probe-target interaction	14
Standard in situ hybridization conditions.....	32
Starry background fluorescence.....	84
Steric interaction between the hapten and anti-DIG antibody	11
Storage of DIG-labeled probes.....	57
Strength of hybridization bond.....	14
Streptavidin	11
Stringencies	20, 30
Stringency washes	30, 147
Substrates.....	10, 22
Synthetic oligonucleotides.....	14

T

T3	10
T7	10
Tailing	56
Taq DNA Polymerase.....	10
Temperature	28
Template amount, effect of.....	36
Terminal deoxynucleotidyl transferase	14
Tetramethylbenzidine	99
Tetramethylrhodamine-dUTP	46
Tetrasomy	78
Texas Red	21
Thermal stability.....	15
Tissue preparation	131, 157
Tm	28
Tm, calculation.....	29
TMB.....	98
Triple color FISH.....	76
Trisomy.....	77
Troubleshooting guide for	
– in situ hybridization	82
– general strong staining of chromosomes	84
– hybridization signal fades.....	83
– labeled probe molecules are too long.....	84
– microscope.....	83
– milky background fluorescence	84
– modify chromosome denaturation	83
– probe labeling	82
– size of labeled probe	82
– starry background fluorescence.....	84
Tumor cell.....	94
Twelve color FISH	76
Types of nonradioactive hybridization methods.....	9

U

Unique probe sequences	39
------------------------------	----

W

Washes	20
Whole mount FISH.....	197

X

X-Gal.....	108
------------	-----

Y

Yield of DIG-labeled Nucleic Acids.....	59
YOYO-1	21
